

## Tax and Regulatory Update Service

For PeopleSoft® Systems

ERP Applications today must pay heed to the ever changing labyrinth of laws, regulation, and tax codes that impact them. Unlike older ERP systems in which tax refreshes were decoupled from the application, modern ERP systems such as PeopleSoft embed regulatory updates inside manufacturer-delivered patches, updates, and fixes which in turn update the underlying table values.

LegacyMode's *Tax and Regulatory Update Service for PeopleSoft™*, simplifies long term tax and regulatory support of PeopleSoft® environments by providing a proven, independent tax and regulatory database of values, changes, and updates as well as a one-time service to map this database to your existing environment. Subsequent updates are then easily performed via download script.

LegacyMode has partnered exclusively with Independent Systems ([www.taxrates.com](http://www.taxrates.com)) as its tax and regulatory data provider of choice. Independent Systems has been providing mission critical tax data for ERP systems since 1977. Coupled with LegacyMode's PeopleSoft® Tax Connector™ technology, LegacyMode and Independent Systems provide consistent tax rates and regulatory data to PeopleSoft shops for many uses including tax process automation, tax updates for de-supported modules and complete tax and regulatory support for PeopleSoft legacy deployments.
